

17 June 2015

SENT TO LSU AGCENTER/LOUISIANA FOREST PRODUCTS DEVELOPMENT CENTER - FOREST SECTOR / FORESTY PRODUCTS INTEREST GROUP

To all:

Attached is latest housing note. Not much changed from last month - housing continuing slow climb from collapse in 2008. Still lots of problems - domestic economy; world economy; jobs; poor credit with many potential buyers; uncertainty from continuing political discord in Washington; Underwater mortgages, down to 16% from 30% several years ago, remain a problem. According to Stan Humphries, Zillow, this will slow the housing recovery as 15 - 20% of the market remains "non tradable".

Rental housing continues to drive the overall housing market and a recent report from the Urban Institute suggests that this could continue for some time(see reference in the attached Powerpoint). The report points out that immigrants will make up the bulk of net new household formations for the next 20 years, but many cannot buy homes due to insufficient incomes. In addition, student debt, demographics, and sub par economy continue to pose problems. Household formations could continue trending downward in such a scenario.

Finally, the Fed will start increasing rates , probably in September. The increase will be slow/gradual, but will be interesting to see how the economy and housing respond.

Housing comments – June , 2015

- *May starts fell 11.1 % (to 1.034 million, annual rate) from revised April numbers - single family fell 5.4% to 0.680 million (SAAR)*
- **Multi family continues to be the driver (35% of total) – rental prices still increasing – single family sales remain weak and this has big impact on wood product prices. This trend will probably continue for some time.**
- **Economic issues - slowing world economy(China GDP slowest in past 6 years); sub par domestic job market; sluggish income growth; continuing tight domestic credit environment .**
- **Job market is improving , albeit slowly, and wage gains are starting to pick up, however, the real unemployment rate remains high at 10.8%. This equates to about 16 million people who are either unemployed, stopped looking, or working part time because they can't find full time jobs. This “slack” in the job market will keep wage gains modest for some time.**

The manufacturing sector (good paying jobs with benefits) use to be 23% of the workforce, but today it is down to 13% as the service sector now employs the bulk of Americans. Problem is that half of service sector jobs created today are low paying with few benefits (health care, pensions, etc.).
- **This won't change as the economy has evolved into a service economy with some high paying high tech jobs in the IT field, health care, etc, but most are lower paying jobs in the retail sector. To change this, we need to invest in infrastructure – R&D, education, highways, airports, communications, That is the key to higher paying jobs, productivity, competitiveness, GDP, and, yes, housing starts!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!! Productivity fell at a 3.1% (annual rate) in the 1st qtr as businesses reduced investment spending.**

Rental demand versus single family housing ---

There are growing indications that rental demand may continue to increase for some time – a recent study by the Urban Institute suggests it may continue for another decade or two

(<http://www.wsj.com/articles/new-housing-crisis-looms-as-fewer-renters-can-afford-to-own-1433698639>)

Why - - demographics; growing minority population; student debt; weak income growth; E.g., Minorities will make up 75% of net household growth over the next 10 years, and 85% during 2020- 2030 (**see next slide**). They are less likely to own homes (lower incomes is main reason) so home ownership continues to fall toward 60% by 2030. During this time, rental demand will increase dramatically. Although this is just one study, it provides food for thought. One potential question with the study, however, is other studies show that although immigrants rent initially, over time they purchase homes at a rate equal to or higher than native born Americans. Why – people come to the U.S. to improve quality of life, and for most, this means homeownership. Of course, this suggests that the U.S. has to find a way to deal with the “immigration problem”., and minorities' incomes will have to increase.

(http://www.engineeredwood.org/Data/sites/3/documents/EngWoodJournal/EWJ_Spring2010.pdf)

Anyway, this has potential implications for home ownership; single family construction; and demand for wood products – lots of variables and scenarios.

More headwinds for homeownership – demographics, growing minority population, weak income growth, and student debt combine to drive homeownership lower!!
 That means fewer single family starts and stronger rental demand - - -
 A trend that could last for another two decades according to the Urban Institute

Home Builders

Minorities, who will account for more household-formation growth...

Net new households

11.6 million households

...are less likely to own homes, which will drag down the U.S. homeownership rate...

...as rental growth surges.

Average annual net growth in renter households

Sources: Urban Institute (household formation, homeownership rate forecasts); Commerce Department (homeownership rate); Harvard Joint Center for Housing Studies (renting households)

THE WALL STREET JOURNAL.

Source: (<http://www.wsj.com/articles/new-housing-crisis-looms-as-fewer-renters-can-afford-to-own-1433698639>)

Falling rental vacancy rates will drive rental prices higher
And this will drive multi family construction – Economics 101

**Multi family permits reached 592,000
In May – the highest in 25 years!!!!**

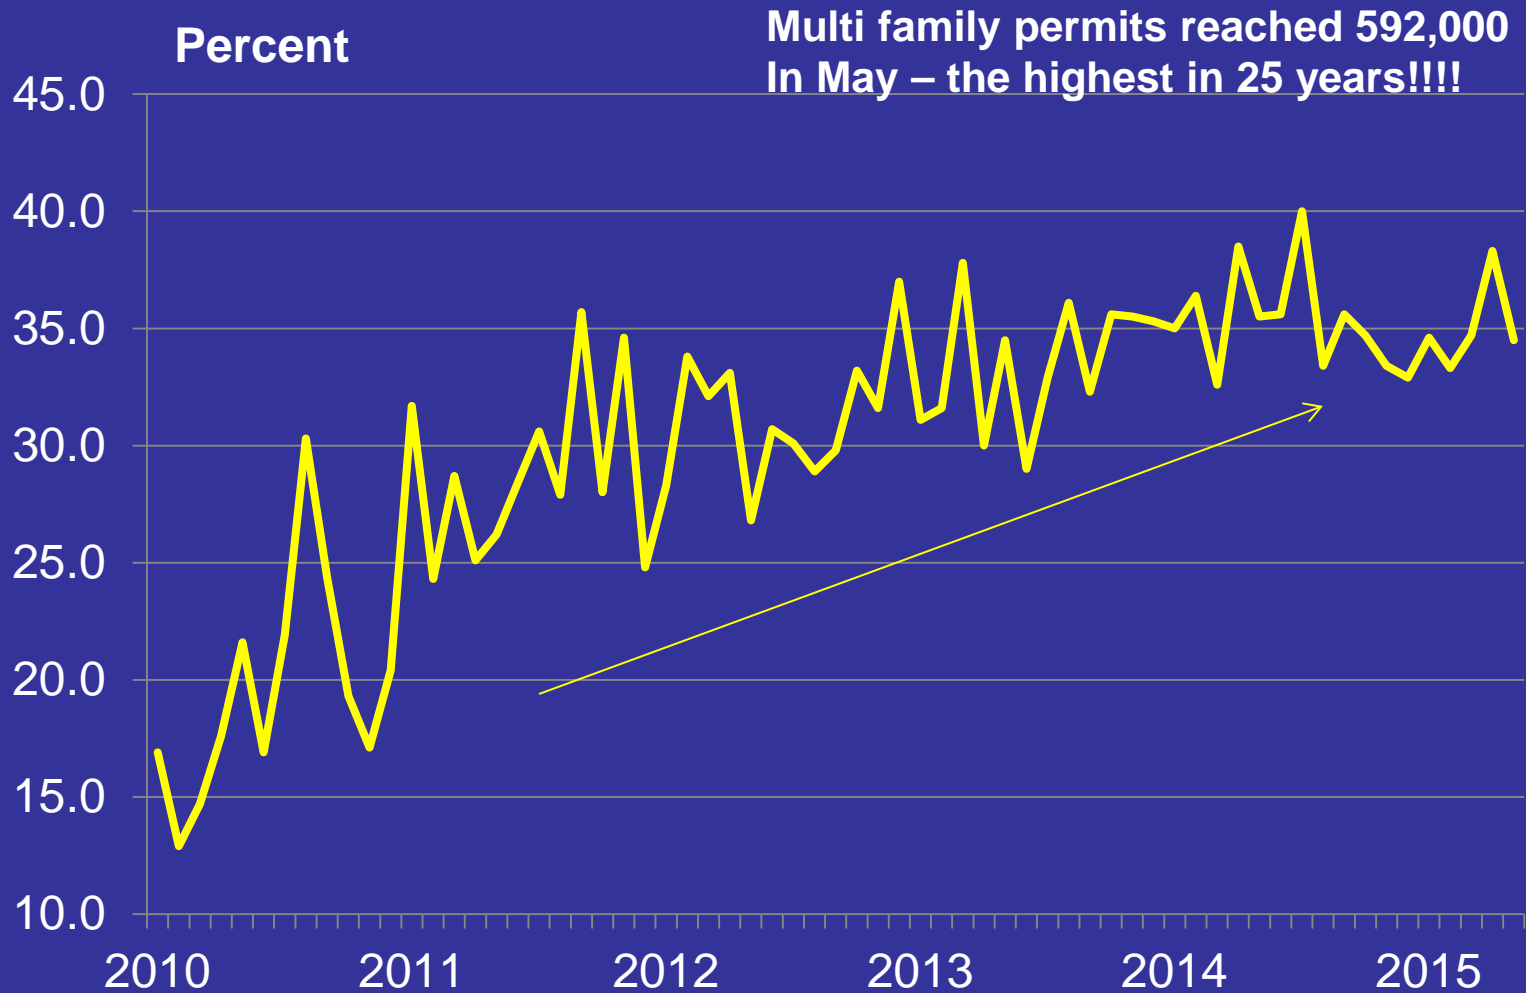

Many young people can't find good jobs – so, they rent instead of Buying a house

The bulk of multi family housing are rental units

Multi family share of housing starts – upward trend Should continue for some time???

Housing inventory – short supply is driving up prices!

One more issue impacting housing – with starts remaining weak, we will see a continuing shortage of inventory, and that means higher prices. Many Builders just don't see enough traffic supporting an increase in starts. In the Resale market, many people can't list their homes due to foreclosure issues, Underwater mortgages, Job problems, credit issues, etc. Current inventory is 4.6 months for new homes and 5.3 months for existing homes – six months supply is considered a 'healthy market'

Another good article on current housing situation re: dilemma for 1st time Buyers. Limited choices; higher prices; weak income growth; weak New home construction; --- short supply drives prices higher putting more 1st time buyers out of the market. **I've said this before – return of 1st time Buyers is needed before housing returns to “normal”!**

(<http://finance.yahoo.com/news/first-time-buyers-face-hurdles-101147166.html>)

Existing home inventory at 4.5 months – short supply drives prices higher

Months supply, single family

Low inventory driving home prices higher

Still Rising

Analyzing economic factors and including suburbs, Local Market Monitor forecasts 2%-9% growth in home prices in these 10 markets.

Richest Markets	Avg. Home Price (Thous.)	12 Mos. Growth Forecast
San Francisco	\$859	5%
Los Angeles	433	8
San Diego	400	2
New York	392	5
Washington	356	5
Cheapest Markets		
Detroit	\$116	6%
Cleveland	149	5
Las Vegas	179	8
Tampa	184	7
Atlanta	190	9

Another headwind – stronger dollar crimping demand in markets Popular with foreigners

Relative Real Estate

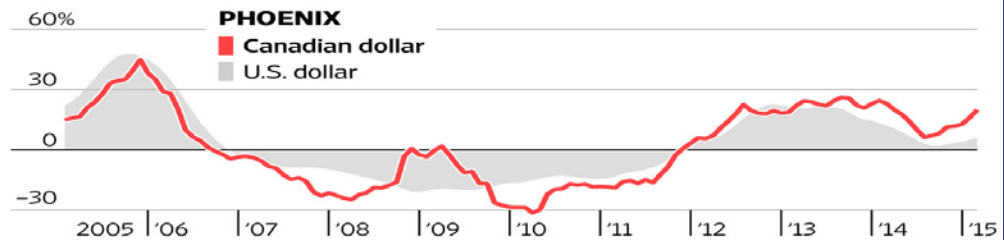

The dollar's increase against many other currencies has made U.S. real estate more expensive for foreign investors. The change is particularly important in markets with a high concentration of foreign buyers, such as Phoenix and Miami.

U.S. median home price, change from 2011, as denominated in select currencies

Source: Zillow

Metro-area median home price, change from a year earlier

THE WALL STREET JOURNAL.

Underwater mortgages still a problem: remain historically high at 15.4% (8 million) in 1st Qtr 2015. Healthy market is 1 – 2% underwater. Problem is that 15 - 20% of the market becomes “non – tradable” according to Stan Humphries at Zillow, and this will continue to slow the Housing recovery

Employment situation - our biggest problem - but, getting better with 280,000 jobs created in May

Net change in non farm payrolls – monthly, thousands

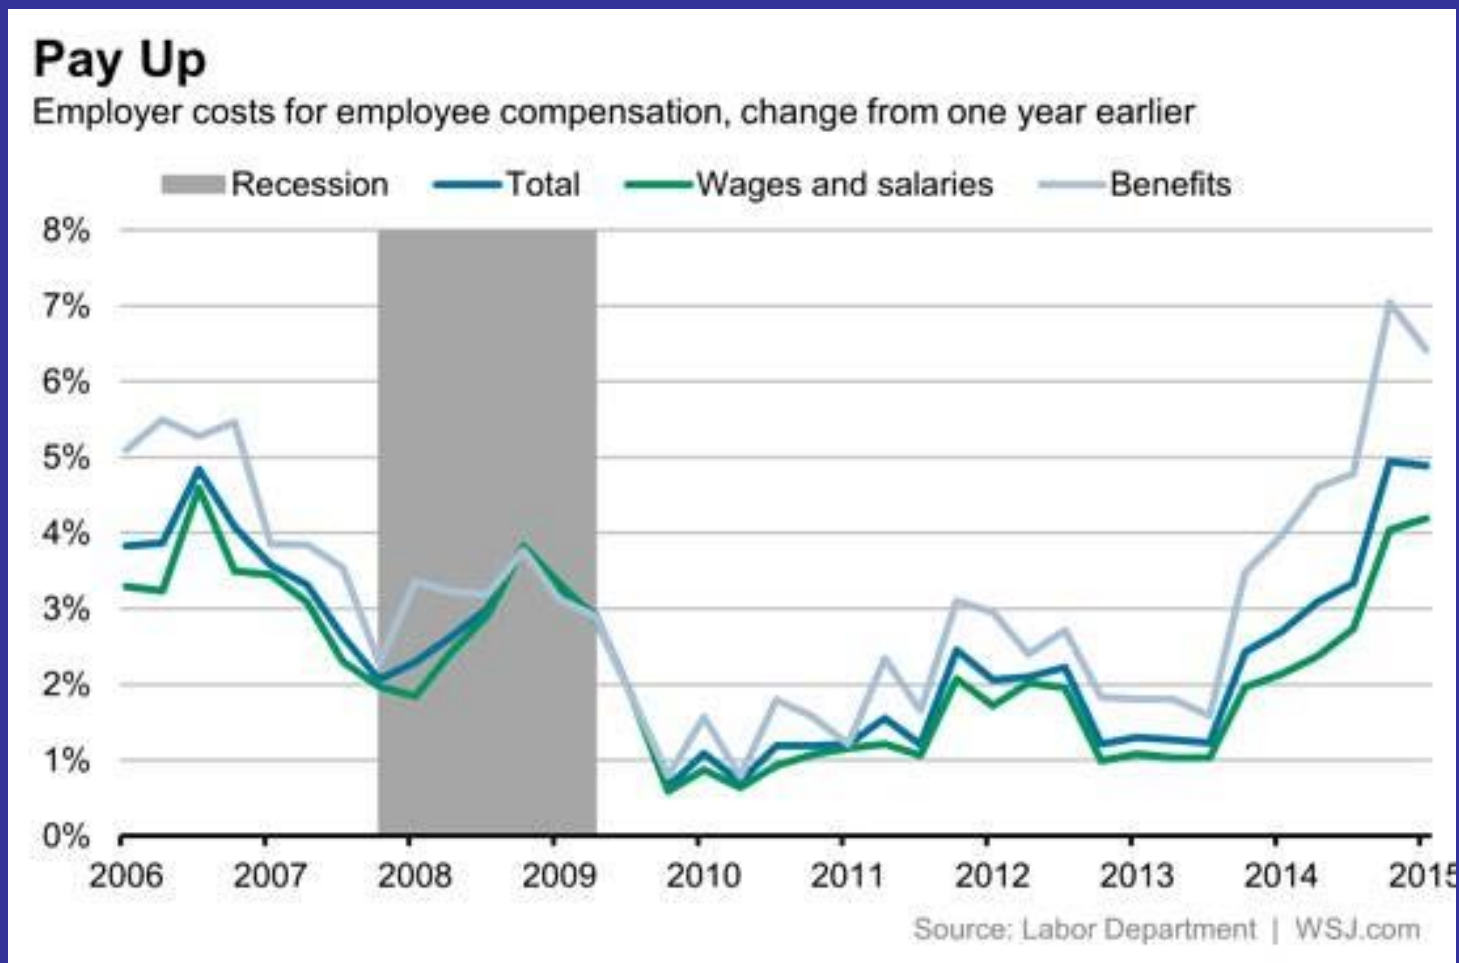

Source: U.S. BLS (www.bls.gov)

Unemployment rate keeps coming down – but, nearly 7 million remain “underemployed” – working part time, but want full time jobs

There are about 16 million people either unemployed, underemployed, or stopped Looking – **Key reason why wage increases are stagnant!!!

Some Good news - - Wages and benefits are starting to pick up – total employee compensation (wages, salaries, benefits) up 5% over Past 12 months

Labor force participation rate is shrinking – demographics is probably the main reason – we'll see skilled labor shortages increase over the next decade - we're already seeing construction related shortages with brick layers, masons, electricians, plumbers, etc. One solution – Revamp our education system (a 4 year degree isn't for everyone – 2 year Community colleges, vocational schools, are better fit for many, and they are much cheaper). Excellent article (<http://finance.yahoo.com/news/should-i-go-to-a-trade-school-162413337.html#>)

Economic growth negative 0.7% – 1st Qtr 2015 –

Weather; strong dollar; lower energy prices hurt oil producing states; ...

- (1) Slowing world economy (European recession; weaker China growth)
- (2) Stronger dollar will reduce exports and increase imports – negative impact on manufacturing jobs which is key to income growth in USA
- (3) Political stalemate, terrorism, currency wars, growing national debt, ...

We need to invest more to become more competitive, create better paying jobs, and grow GDP

GDP derives from number of workers plus productivity (real GDP/worker) – (<http://marketrealist.com/2015/01/2-factors-drive-real-gdp-growth/>) -- with lower productivity, higher employment won't generate as much growth in GDP – this is why improving employment doesn't give us strong GDP growth. *We need to invest in infrastructure to improve productivity!!!!!!!!*

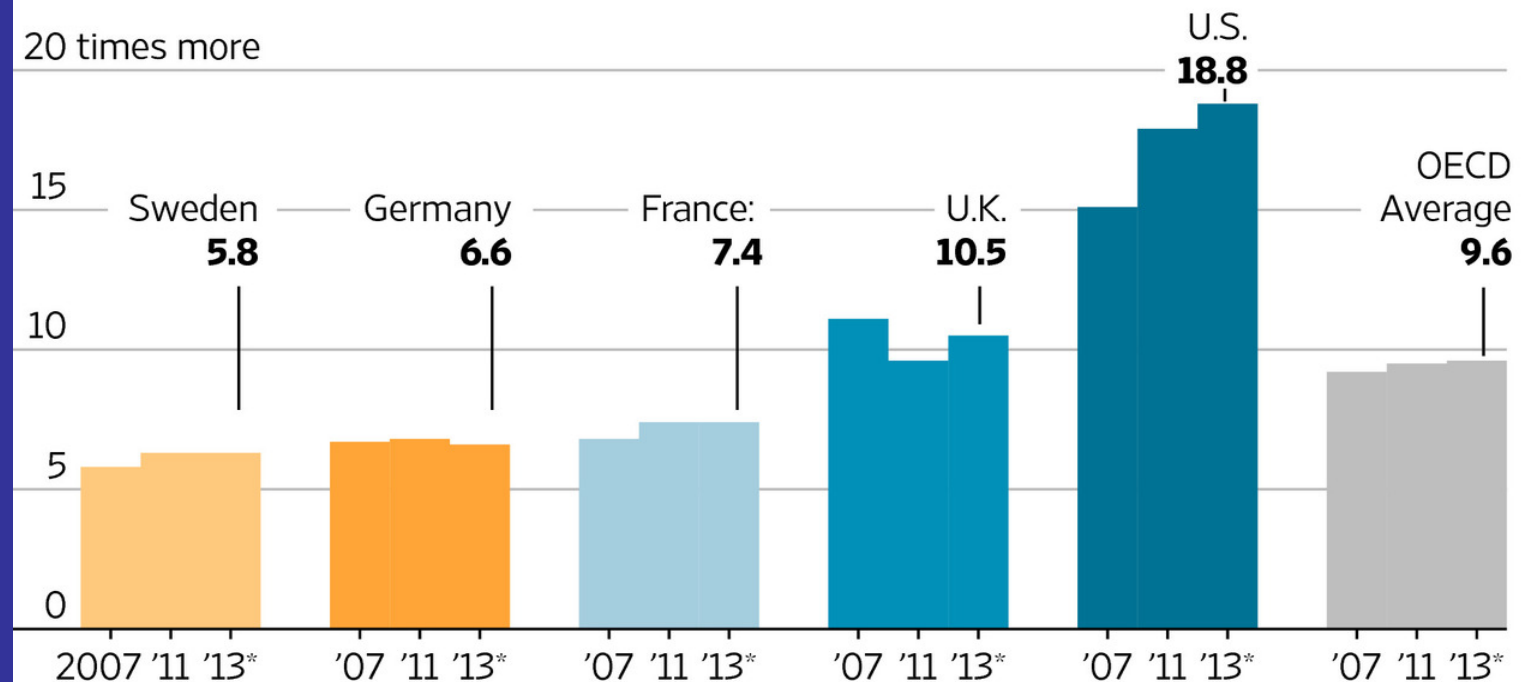

Source: BLS (<http://www.bls.gov/lpc/prodybar.htm>)

Good article from OECD study – 40% of developed world’s population not benefiting from economic growth – goes on to suggest

“When such a large group in the population gains so little from economic growth, the social fabric frays and trust in institutions is weakened.” Translation - - leads to serious social Problems (drugs, crime, apathy, terrorism, wars,..) and this leads to slower economic growth.

More Unequal?

How many times more, on average, the top 10% of households earn relative to the bottom 10%

*Or latest available year

Recent Housing statistics

Starts are inching forward – I'm concerned that the Feds will 'grease the wheels" again – e.g., Fannie and Freddie, FHA --- lowering down payment requirements and premiums on mortgage insurance, I guess they forgot what happened in 2008????

Source: Census (<http://www.census.gov/const/www/newresconstindex.html>)

Things are improving

Source: (<http://americanactionforum.org/housing-chartbook>)

Hopefully, things will improve this year – as the article indicates, Housing is doing best in places where the job market is healthiest. As always, jobs are the key metric to watch, and, a further reminder that Housing is a regional market.

Green Shoots

Home sales are up across the board for the first two months of 2015, compared to 2014's weaker start.

Housing market status through February of each year

U.S. sales of existing single-family homes

U.S. sales of new single-family homes

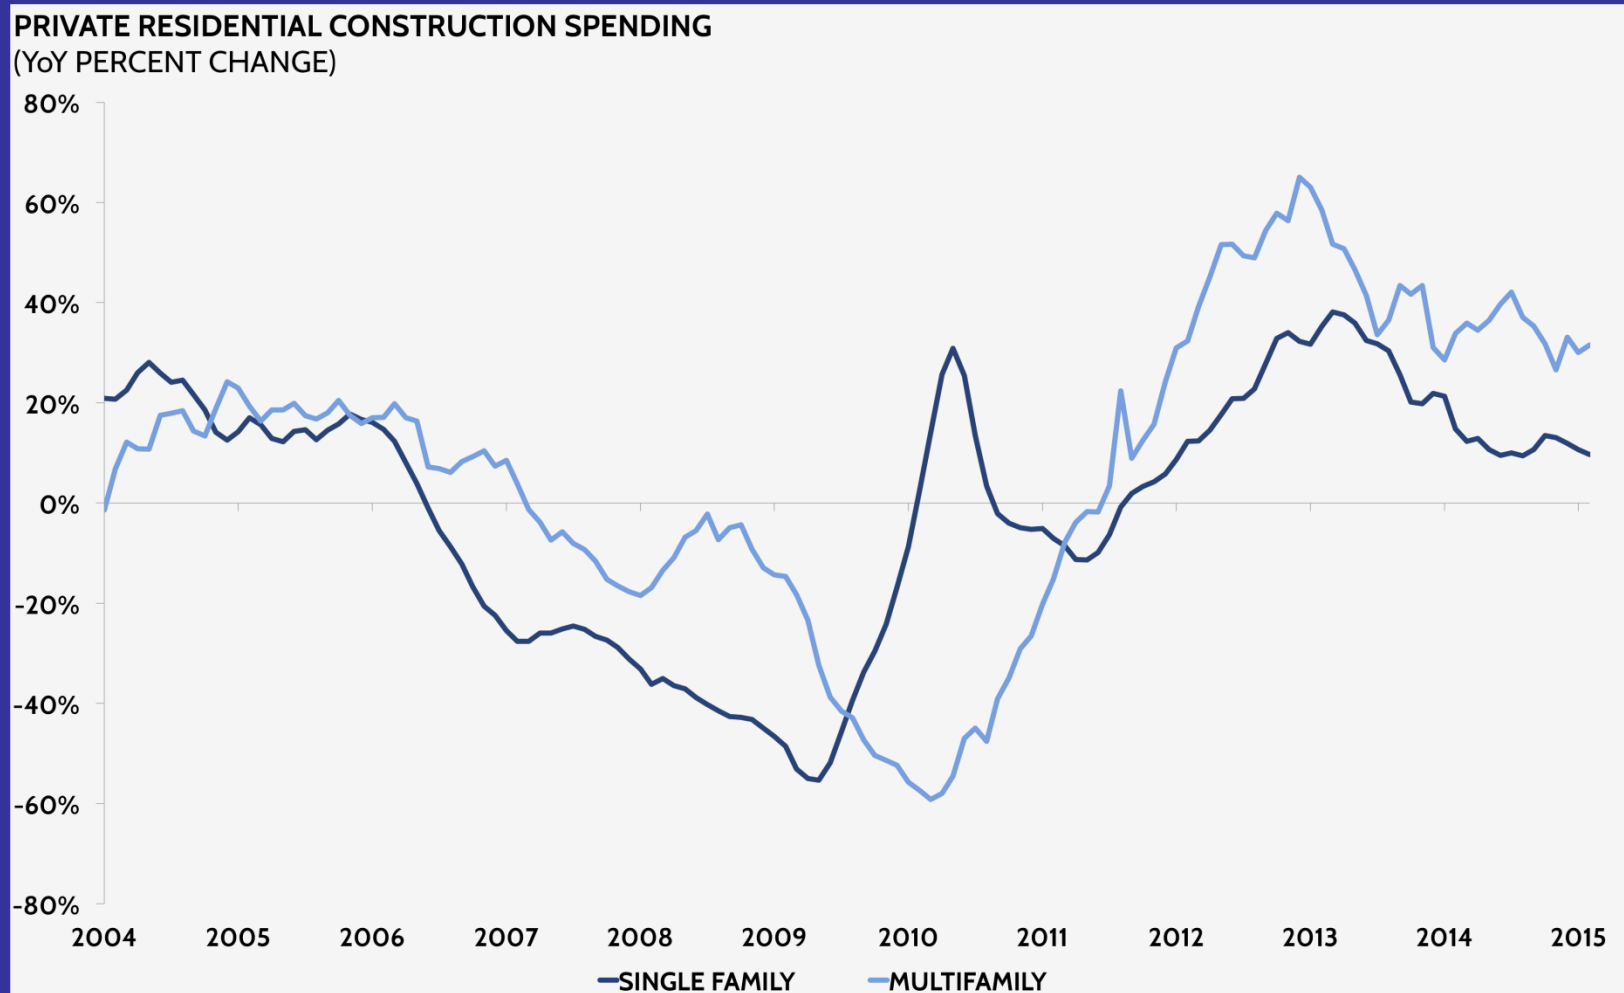

Housing permits issued in Jacksonville, Fla.

Sources: National Association of Realtors (existing); Commerce Department (new; Jacksonville, Fla.)

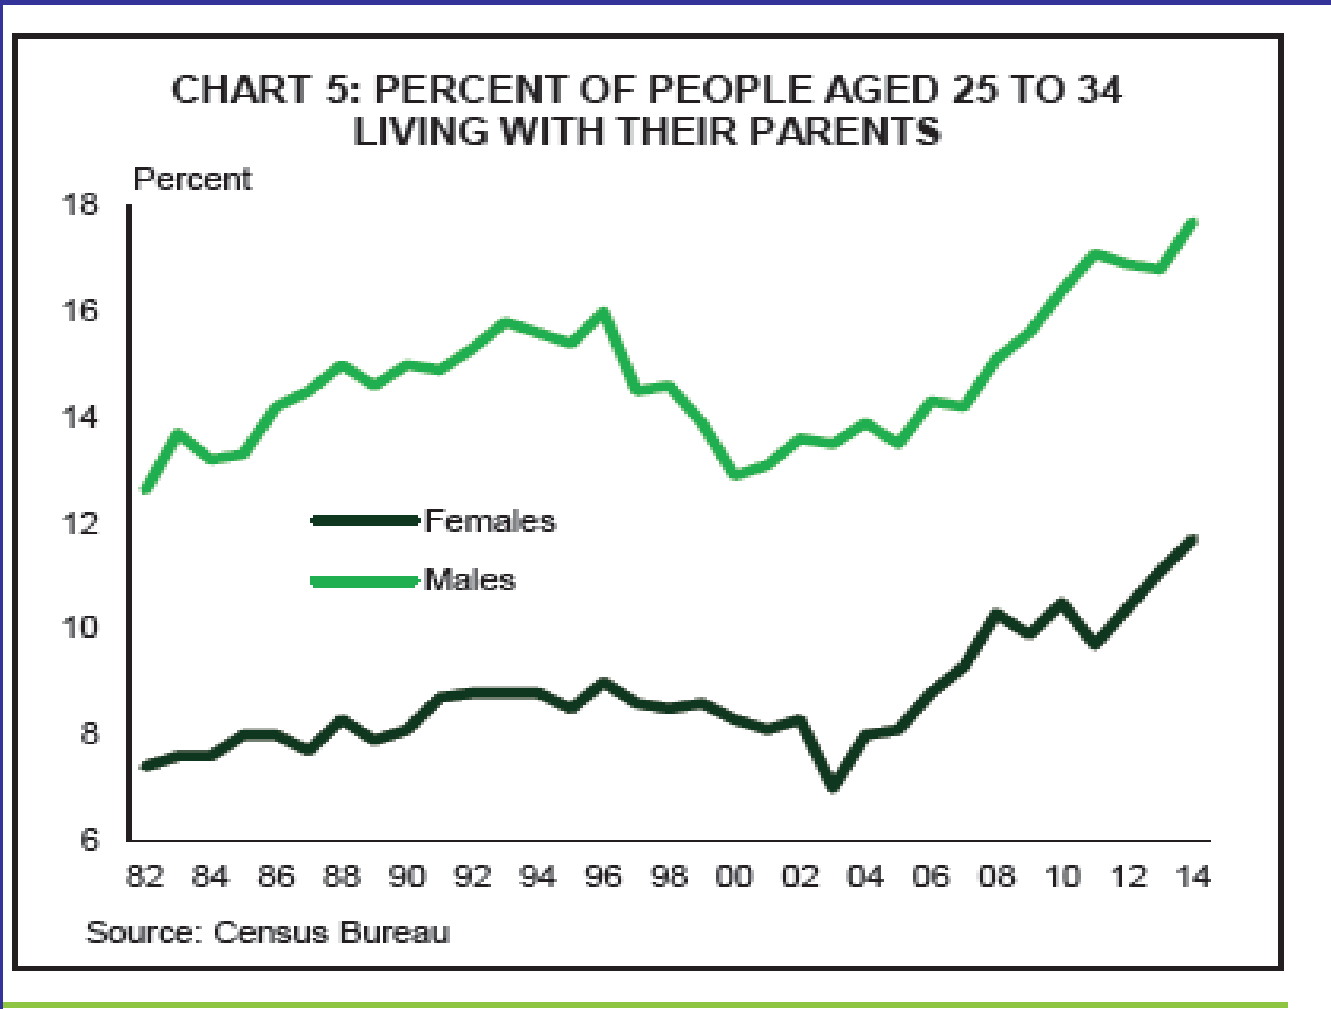

THE WALL STREET JOURNAL.

But, Spending on MF increasing much faster than SF

Source: (<http://americanactionforum.org/housing-chartbook>)

Many children still living with parents thus slowing Household formations

Slower rate of household formation will constrain single family housing Starts

Impact of weak household formations - -

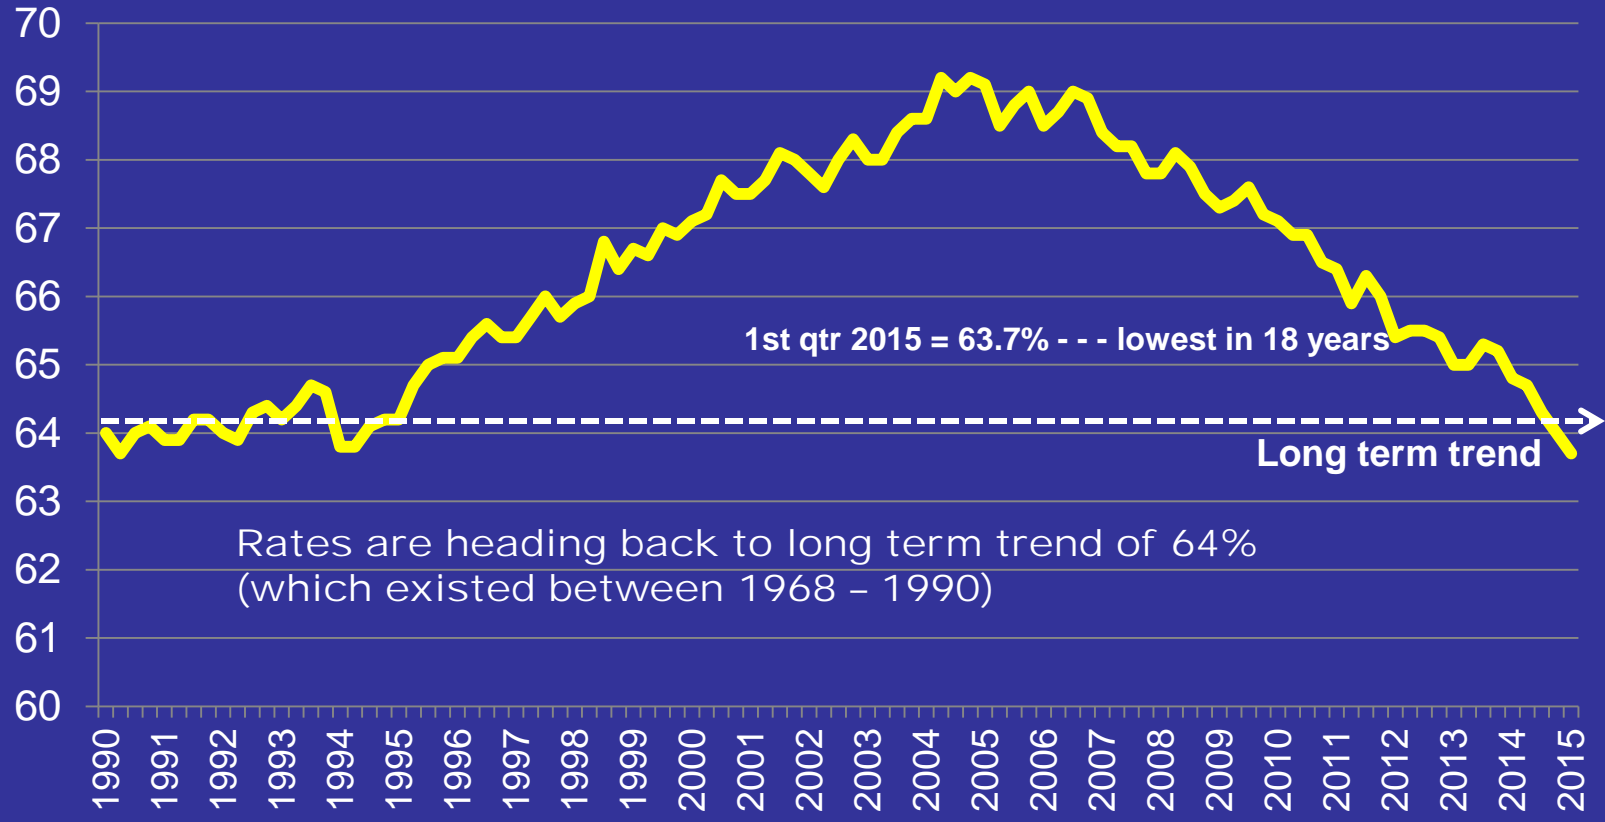

homeownership rates have been falling for the past ten

Years - when the economy gets back to normal,

Will people return to to single family or will renting remain in favor with many?

There will be impacts on wood products demand

Home Ownership(%)

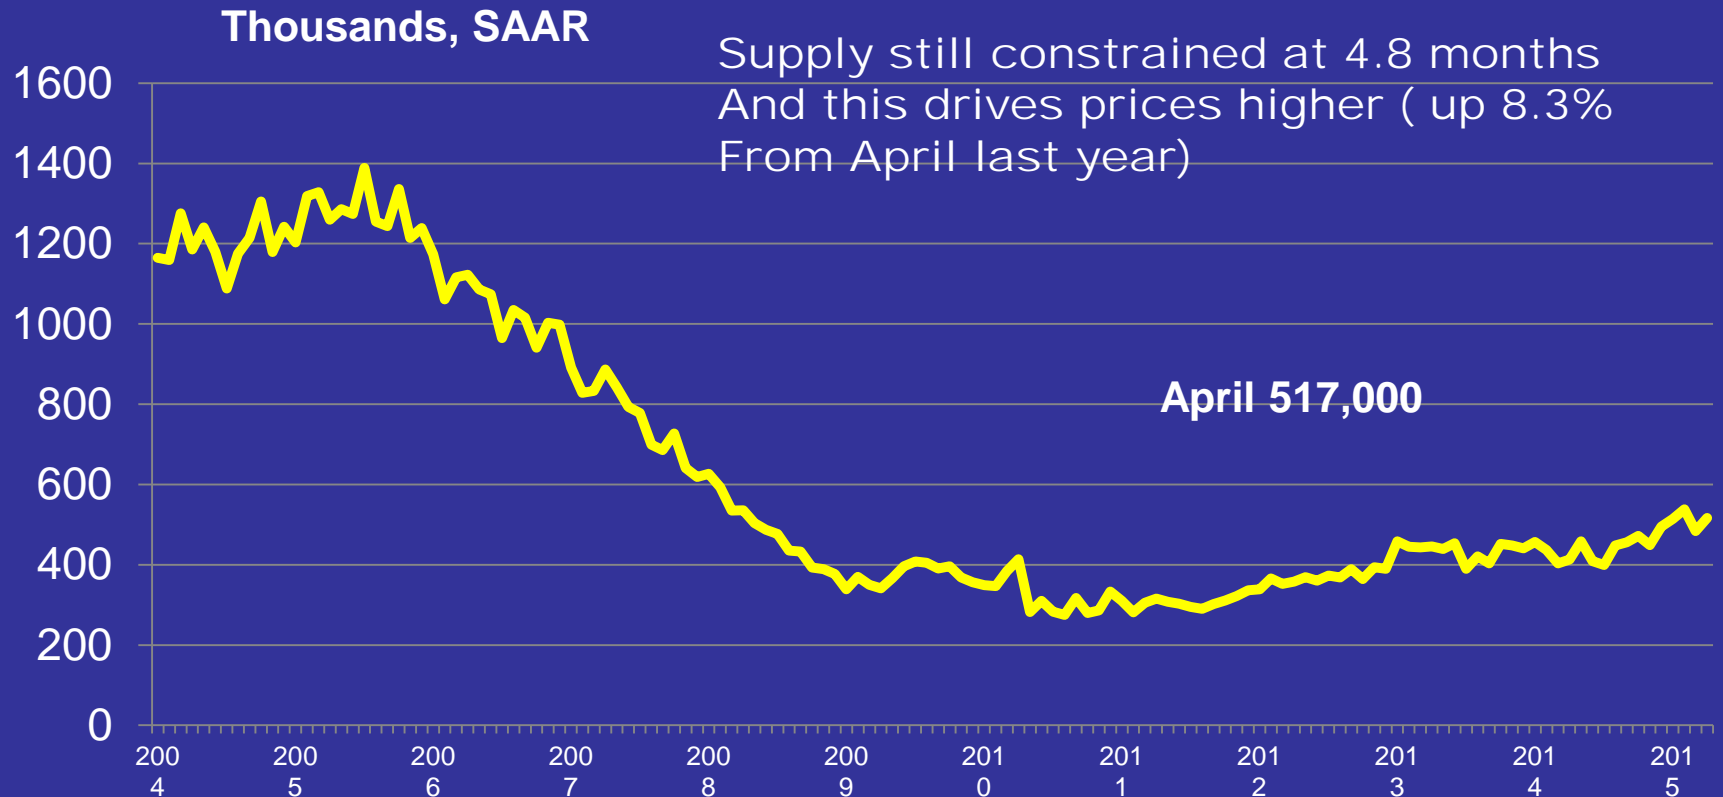

Source: Census (<https://www.census.gov/housing/hvs/data/q413ind.html>)

However, number of households keeps increasing - this is a good sign as Number of households represent renters plus homeowners – even Though renters have been increasing faster than owners in past several Years, eventually many of these renters become owners - so, maybe a “light At the end of the tunnel”???

New Single Family Home sales are the key statistic to watch – Sales drive housing starts – this drives demand for wood products!!!

6.4% above revised March rate, and
Almost 26% above April last year

Source: Census (<http://www.census.gov/const/www/newressalesindex.html>)

Resale market continues to improve, but still heavy to cash sales with 1st time buyers still below trend (traditionally they represent about 40 – 45% of market, but today they are at 30%). Another problem today is tight Supply , currently at 5.3 months. Healthy market is about 6 months supply. This is driving up prices, currently up 6.2% YOY

Single family (incl condos), Monthly, Thousand units, SAAR

Source: NAR (<http://www.realtor.org/research>)

Some conclusions – housing continues to improve albeit slowly

- (1) Economy will continue to improve -- **2015 growth expected to be about 2.5% - however, looks like the "disconnect between the economy and housing will continue ("two tiered economy"???) for another year or so**
- (2) Still not a healthy housing market - 1st time buyers are absent and household formations are off 50% from trend – furthermore, many of sales are cash, many foreign buyers, etc. I.e., **NOT SUSTAINABLE**
- (3) The key to a recovery in housing is the return of 1st time buyers, traditionally about 40- 45% of the market. Current market skewed to cash buyers and investors. 1st time buyers are mostly young people, **but they can't find good jobs.**
- (4) Political discourse will continue to slow a truly strong economic and housing recovery – too much uncertainty re: Affordable Care Act/Obama care; immigration reform; direction of interest rates Uncertainty will slow job creation, private sector investment. E.g., capital spending lagging in this recovery
- (5) Productivity becoming a problem for U.S. economy – real GDP driven by population (number of workers) and real GDP/worker or productivity. During past 7 years, it has grown 1.7% annually whereas the average over previous 17 years was 2.4%. The recent drop is probably due to in large part to lack of investment by private sector. That won't change much until they get more confident about the future of the country. Political discord is a real drag on the economy whether you want to believe it or not – it creates uncertainty, and clouds decision making.

Longer term:

- (1) *makeup of U.S. economy is changing and this is impacting spending patterns and housing choices.***
- (2) *There are growing concerns that the job market is undergoing long term – structural – changes. Automation seems to be reducing job prospects for the middle class while creating jobs for the highly skilled and less skilled sectors . End result is stagnating family incomes that could translate to lower total housing demand with more emphasis on multi family/rental demand.***
- (3) *Currency devaluations are the preferred solution to “low inflation” concerns. Central banks in Europe and Japan are following the U.S. with quantitative easing/printing money, in order to spur demand by weakening their currencies. Good article in WSJ suggesting that the “low inflation world” is really a symptom of too much capacity relative to demand, and the solution isn’t currency devaluation. Better solution may be developing technology to produce products that fulfill market place demands not being met by existing products***
- (4) *Eventually, Central banks will have to raise rates and nobody knows how the various economies will respond. We’ve never had so much liquidity in the system – it causes various types of bubbles (assets like houses, stocks, etc.), and a misallocation of resources. Interesting times ahead.***
