Lumber business becomes first in the world to stock Hempwood

By **Robert Dalheim** February 12, 2020 | 10:06 am EST

ANAHEIM, Calif. - Southern California-based Reel Lumber Service says it is the first company in the world to stock HempWood, the now-famous reverse-engineered wood substitute.

"Reel Lumber Service is honored to be the first company in the world to stock HempWood," Reel Lumber said in a press release. "We believe this eco-friendly alternative to traditional lumber WILL revolutionize the industry. Unlike hardwood lumber it only takes 120 or so days to take a hemp seed all the way to cultivation!"
